

Why I want to work at Traefik Labs:

- The puzzle was one of the most engaging methods I've ever seen to apply for a job. I applaud Traefik Labs for using a Docker image to look for applicants. I loved solving the puzzle.
- I like the Platform Engineer role @ Traefik Labs.
- I have been an engineer in a Platform team for several years.
- I also worked in a DevOps team.
- I understand Ingresses.
- I understand GitOps.
- I am good with Kubernetes too. I'm CKA and CKAD certified.
- I am a Red Hat Enterprise Linux certified architect (up to level 5).
- In fact, I completed over 50 certifications already, and I always like to learn more.
- I have plenty of experience. Have a look at my resume in this GitHub repo: <https://github.com/meilinkm/traefik-jobs-solution>
- I love technical challenges and solving complex problems!
- I strongly believe in Open-Source. I think there are so many Open-Source projects these days that are so good that there's absolutely no reason to use anything else.
- I've been creating code for as long as I can remember, and I think quality code is important.
- I understand the importance of teamwork and have always worked in teams.
- I have experience with modern cloud infrastructure, but I can learn more about it.
- I'm often an end user myself too, so I understand the importance of the end user experience.
- I have worked in the USA for 16 years and in several European countries thus far.
- I now live in the Netherlands. I recently moved from the USA to the Netherlands.
- I am a Dutch citizen, and I can speak/read/write Dutch and English fluently.
- Je parle un peu français aussi, but don't expect too much of it. 😊
- When set realistically, I can most certainly meet goals!
- I am looking for a company that embraces Work-From-Anywhere.
- I have been working remote for 5 years now. I have my own office at home with 2 large desks, a wonderful chair and a big 43-inch monitor - and air conditioning - which allows me to focus on my work, while also being flexible about when I work.
- I have my own home lab, and I'm always trying out new things with it.
- I also own a Ubiquiti Dream Machine and a 24 port switch, with Gigabit Ethernet, so connectivity is no issue.
- I love not having to commute to the office. I feel my time is better spent, if I don't have to commute regularly.
- I do not mind travelling internationally. In fact, I enjoy international travel.
- I didn't know anything about Traefik Labs until yesterday or any of its products, until yesterday, but I'm eager to learn, if you let me.
